

Group T Mining was formed in 1990 and duly incorporated in the Republic of South Africa.
Over the past 30 years the company has built a solid reputation across the African continent, it provides specialised technical mining services on contract to the major Gold, Diamond, Platinum and base metal mines in South Africa as well as abroad.

As a respected leader in mechanised mining, Group T can assist mining houses to resolve even the most complex underground and surface mining issues as well as taking on green and brown field projects.
Our dedication to local empowerment, skills transfer, health and safety is unwavering, whilst staying focussed on delivering production targets.

MECHANISED DEVELOPMENT AND LARGE EXCAVATIONS

The group utilises a range of corporate structures to meet the needs of their clients, many of whom have been long-term clients (some up to 20 years)

Low overhead costs enables individual companies to contribute substantially to the profitability of their clients – **ensuring the ability to provide a continuing high level and quality service to the market.** The operating companies bring a vast amount of wealth and depth of experience in mass mining, remote area mobilisation and civil engineering culture to the underground mining environment which provides added value and benefits to clients.

The Group believes in a long term vision – and that long term benefits are not worth sacrificing for the short term gains. As such, **the group seeks to build ongoing quality relationships with their clients based on a mutually beneficial partnership.**

MANUFACTURE, OPERATION AND MAINTENANCE OF ENGINEERING SOLUTIONS

The group has successfully manufactured and installed a large range of engineering solutions to the underground and surface mining market. All these are customised to the needs and requirements of each client and situation.

The group also offers operation and maintenance of engineering plants like crushers and batching plants

REHABILITATION, CIVILS AND TOTAL MINE SUPPORT SOLUTIONS

Group T offers full rehabilitation and civil works with roadway construction and concrete works at the forefront of their experience.

Complete mine support, robotic shotcrete, ventilation and construction services are part of the long term goals and relationships with clients during the production phase of the mines the company operates at.

WE SUPPLY AND APPLY

The Group has full capability to supply and apply or install all mining and engineering related solutions to the market with a complete package approach.

SURFACE MINING AND MINERAL PROCESSING PLANTS

Over the years The group has been instrumental in bringing a civil engineering mindset to mining in South Africa in both underground and surface mining developments. **With many years of practical, hands-on experience across a host of different disciplines** the group is able to supply and end to end approach to mine planning and development. – along with the technical expertise and skills to implement and complete projects.

GROUP EXPERTISE

- Mechanised development and support
- Batch-plant and laboratory management
- Mass void filling
- Large underground excavations and silo's
- Arch Set / Steel Arch installations
- Ventilation seals
- Redundant shaft re-opening and accessing
- Ore pass Rehabilitation
- Exploration and core drilling
- Drop raising and box-front construction
